   STREET AND NUMBER: Independence Avenue and 1st Street, S. E.
   CITY OR TOWN: Washington
   STATE: District of Columbia
   CODE: 11
Probably built c. 1680, although its mammoth stone chimney may date from before 1650, the Clemence-Irons house is a one-and-one-half-storey Rhode Island "stone-ender." It has been carefully restored--this work based on internal evidence as much as possible, and an excellent and voluminous record, consisting of text, photographs and drawings, of the restoration process has been compiled. The house is capped by a steep gabled roof, which extends over the rear lean-to at a slightly reduced pitch; the roof is now covered with heavy, hand-split shingles. The house faces south, and almost its entire western end is made up of a stone chimney-wall which rises to conclude in a very large pilastered stack. The lean-to part of this chimney wall was built when the house was restored in the 1940's, after evidence was discovered proving that the four-room lean-to plan was original. (The house's roof may originally have been thatched--a thought suggested by the spacing of the purlins for the roof framing.)

Unlike most houses of the seventeenth century in the Providence vicinity, the exterior walls here are studded; they are closed with vertical boarding and covered on the exterior with narrow, weathered clapboards. The very small casement windows, glazed with diamond-shaped panes of leaded glass, were installed in the course of restoration, as was the front door, made of three thicknesses of planks bound together by knob-headed nails.

The four-room plan, which is original, is almost square in dimensions. The entrance leads into the keeping-room, fifteen feet square and with a huge stone fireplace across its west end; here a winding staircase beside the fireplace rises to the garret. A fifteen-by-seven-foot bedroom adjoins the keeping-room in the front of the house. The lean-to across the rear consists of two rooms. A stone fireplace built into the west wall of the larger lean-to room was constructed as part of the restoration, making a typical Rhode Island widened chimney with fireplaces set side by side. There is a cellar reached through a trap-door in the floor, and the garret contains one chamber.

The magnificent heavy-timber framing of oak is fully exposed on the interior. The mortise-and-tenon construction is secured with wooden tree-nails; the girts and the summer-beam, which runs perpendicular to the fireplace, are all chamfered and stopped. As in some other seventeenth-century houses, the sills are set on top of the floor joists, above the very wide pine floorboards, so that they must be stepped over upon entering the house. The ceiling consists of the exposed joists and floorboards of the garret above. Interior walls and doors are sheathed with wide vertical boards finished with bevelled and beaded moldings along their edges.

(See Continuation Sheet.)
7. Description.

Much of the material of the house dates from its restoration by the Rhode Island architect Norman M. Isham after 1938, although in design and construction he carefully followed both seventeenth-century tradition and clear evidence found in the house itself. In the restoration work everything not part of the original house was removed, including the roof and later wall coverings, the sash windows and doors, some adjoining ells and a later rear lean-to--thus leaving only the basic frame and the early fireplace in the keeping-room. Structural evidence in the garret indicated the presence of an original lean-to which was then reconstructed, and a fireplace was built for the lean-to room. Much of the wall sheathing is original, but no internal evidence was left to show the size and type of the old windows.

Approximation of first-floor plan (not to scale).
### STATEMENT OF SIGNIFICANCE

The Clemence-Irons house is one of the earliest dwellings still preserved in the state, and it is the most carefully documented restoration of an early Rhode Island house in Providence County. It is an extremely fine example of the Rhode Island "stone-ender" and is maintained as a museum.

Thomas Clemence, a friend of Roger Williams, officially bought the property, then part of Providence, on January 9, 1651, from an Indian, Wissowyamake, although he was already living there by 1650, according to the tax lists. Active in political affairs, he became constable in 1661. He represented the town of Providence at a Court of Commissioners at Portsmouth in 1663; at a Court of Deputies at Newport in 1665 and there again in 1671. In 1667 he was chosen Providence town treasurer.

Clemence was one of the twenty-seven men of the area who stayed to defend the town while the other citizens evacuated during King Philip's War in 1676. It is thought that the original house was burned at this time and that the present dwelling may have been a re-building against the surviving stone chimney-wall of the destroyed house.
